Objective

AI/ML, Generative AI, and MLOps Engineer with expertise in building and deploying scalable LLM pipelines, RAG systems, Agentic AI workflows, and production-grade AI solutions across diverse industries. Experienced in bridging the gap between ML research and real-world client deployments with a strong foundation for Forward Deployed Engineering roles.

Technical Skills

Languages & Core Competencies : Python, SQL, Machine Learning, Deep Learning, MLOps, Angular
Frameworks/Libraries : LLMs, LangChain, LangGraph, Scikit-learn, Numpy, Pandas, TensorFlow, Hugging Face, FastAPI
Data Visualization & Analysis : Tableau, Matplotlib, Seaborn, Statistics & Probability
Tools : Databricks, Docker, Kubernetes (AKS), Azure ML, ADLS, Snowflake, Groq, OpenAI API, Git, Bitbucket, Jira

Experience

Chubb | MLOps Engineer (AI / ML) **Bengaluru, India | April 2025 – Present**

- Built and deployed ML models across SIT, UAT, and Production on **Databricks**, leveraging a config-driven approach to dynamically adapt models and packages, and integrated **MLflow** experiment tracking to log metrics and artifacts across runs.
- Developed and deployed **FastAPI** services for AI/ML using **Docker** and Kubernetes (**AKS**) with Kustomize-based manifests, Cosmos DB for config storage, DNS certificates, and NSGs for secure deployments.
- Automated **CI/CD** pipelines for APIs and ML models, reducing manual effort by **40%** and accelerating release cycles.
- Designed and productionized **RAG** pipelines using a config-driven architecture, enabling multi-source data ingestion, intelligent summarization, and seamless delivery of processed datasets into ADLS and **Snowflake**.
- Built an **LLM**-powered Invoice **Fraud Detection** pipeline with multi-step prompting and structured outputs, improving accuracy and significantly reducing false positives.
- Developed a **Kafka** service to publish real event payloads to Kafka topics, enabling end-to-end validation of the production pipeline.

Evertz | Software Engineer (Intern & Full-time) **Bengaluru, India | October 2022 – April 2025**

- Implemented Machine Learning models for forecasting and recommendation systems using Python, SQL, and advanced statistical methods, improving decision-making accuracy.
- Developed responsive, high-performance **Angular** UIs and integrated REST APIs for scalable, real-time application features.
- Applied key ML techniques: Regression, Classification, Clustering to build end-to-end data pipelines and analytical workflows.
- Developed **Deep Learning** solutions using **TensorFlow/Keras** (CNNs, RNNs) and implemented **OpenCV**-based computer vision pipelines. Experimented with LLMs for advanced predictive and generative applications.

Projects

ResearchAI - Multi-Agent Agentic AI System | Python, FastAPI, Groq LLM, Docker

- Built production-oriented multi-agent AI system with orchestration, document retrieval, and self-evaluation; implemented caching, retry logic, and context optimization for robust agent execution.

AI Image Recognition System | Python, TensorFlow, OpenCV, Pandas, Numpy

- Engineered a deep learning model achieving **97.75% accuracy** in image classification through Transfer Learning with MobileNetV2, involving data preprocessing and real-time prediction using CNN, Streamlit, and Docker.

Machine Learning-Driven Credit Card Fraud Detection | Gradient Boosting, RandomizedSearchCV

- Developed a fraud detection model with Gradient Boosting, achieving 94.42% accuracy, **95.79% precision**, and **99.15% ROC-AUC**, optimizing with RandomizedSearchCV and handling class imbalance to reduce false negatives.

Education

KL University **2023 – 2025**
MBA in Data Science CGPA : 8.7

REVA University **2019 – 2023**
B.Tech in Computer Science & Information Technology CGPA : 9.16

Certifications

Azure - Microsoft · Python - Star Certification · Data Science - Scaler · Data Scientist - DataCamp · Tableau - DataCamp
